

Minutes of Meeting

Meeting Details

Date: January 19, 2026
Time: 3:30 PM
Platform: Google Meet

Attendees

- **Client Team:** Lakshman Rao Chirumamilla, Madhu Nyalam, Manish Ranjan
 - **Student Team:** Vikesh, Advait, Amish, Keshav, Venya
-

Meeting Agenda

Initial project scoping, definition of technical requirements, and establishing the roadmap for the healthcare chatbot solution.

1. Project Objective & Scope

The primary objective is to develop a “clinically aware” chatbot capable of answering user queries based on specific medical contexts rather than generic information.

- **Personalization:** The solution must account for the user’s specific clinical history (e.g., treating a wound for a diabetic patient versus a non-diabetic patient).
- **Functionality:** The system will allow users to upload reports or create a medical ID. The chatbot must diagnose issues or provide advice by synthesizing this personal medical record.
- **Current Infrastructure:** The client currently utilizes an Electronic Medical Record (EMR) system that outputs data (diagnostics, prescriptions) in a structured JSON format.

Note: Check for better ways to summarize the medical history of the patient and look for alternatives to JSON format as well.

2. Key Technical Constraints & Requirements

- **Data Privacy:** Personal Identifiable Information (PII) must not be compromised or sent to external public LLMs without anonymization.
- **LLM Architecture:**
 - **Long-term goal:** Deploy an in-house or local LLM.
 - **Phase 1:** Cloud/API models allowed with strict privacy; architecture must migrate to self-hosted.
- **Data Integration:** JSON medical data must be fully utilized to preserve patient context over time.

3. Workflow & Logistics

- Weekly progress meetings.

- Project duration: ~ 3 months.
- Client to clarify responsibility for frontend vs backend development.

4. Action Items

Action Item	Owner	Description	Deadline
Data Review	Student Team	Analyze JSON structure and suggest improvements for token efficiency	Next Meeting
Architecture Proposal	Student Team	Propose LLM/architecture ensuring privacy and performance	Next Meeting
Data Transfer	Client	Share anonymized sample JSON data	Next Meeting

5. Next Meeting Goals

Present a baseline overview including data format critique and a privacy-preserving, context-aware technical architecture.
