

Minutes of Meeting: Healthcare Chatbot Project

February 25, 2026

Meeting Overview

- **Subject:** Progress Review and Technical Architecture Planning
- **Location:** Virtual Meeting (IIIT Hyderabad)
- **Participants:** Vikesh, Advait, Venya, Amish, Keshav

1 Prototype Demonstrations

- **System Integration:** Satyam presented the UI/UX for the doctor's portal, highlighting the patient profile search and the integrated Gemini-based chat interface.
- **Multilingual Support:** Amish showcased the Hindi language support using the Sarvam TTS/Translation API.
- **Current Stack:** The prototype currently utilizes Gemini via API but is designed to be model-agnostic.

2 Technical Challenges & Solutions

- **Context Window Optimization:** Discussed the inefficiency of sending full EMR data to the LLM.
- **RAG & Knowledge Graphs:** Proposed using a Knowledge Graph to backtrack from potential diagnoses to symptoms, optimizing the token usage and clinical accuracy.
- **Local LLMs:** Evaluated the feasibility of Med-Gemma and Qwen (0.5B) for local execution to handle privacy-sensitive clinical data.

3 Action Items

1. **Dataset Integration:** Incorporate the SNOMED CT dataset for standardized medical terminology.
2. **Hardware Optimization:** Test local LLM performance on Mac architecture to identify bottlenecks.
3. **Post-Exam Development:** Resume full-scale coding and RAG implementation following the current exam cycle.
